### Machine Learning Engineer - Search and Recommendations

Dear Hiring Manager,

I am writing to apply for the position of Machine Learning Engineer with the SoundCloud Music Discovery (Search and Recommendation) group, as advertised on LinkedIn. As a Senior Data Scientist with extensive experience in building and deploying machine learning models to solve complex business problems, I am confident in my ability to contribute to the team's mission of delivering high accuracy music recommendation at scale.

My experience in designing and executing experiments and A/B tests to evaluate the impact of new features and changes in games, as well as my passion for devising innovative problem-solving strategies, would be particularly relevant to this role. I am skilled in utilizing software engineering techniques to deliver scalable and robust solutions, and I have led and mentored teams of data scientists with varying levels of expertise to deliver impactful results.

SoundCloud's unique position as both a music-streaming service with the largest catalog of music and an artist services and distribution business is particularly exciting to me, and I am eager to leverage my skills and experience to help users find and play what they're looking for and connect directly with the artists who make it.

Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to SoundCloud's mission.

Sincerely,

**Vladislav Sobolev**
